This catalogue showcases our extensive range of modern lamps. By simply adding a lamp you can instantly rejuvenate any room in your home, open up space or create an interesting visual talking point. Even though you may have plenty of ceiling light in the room, adding lamps can be both decorative and functional.

The extensive range of modern lamps in this catalogue will help you contemporise your home using the newest interior fashion styles. From big, bright colours to beautiful neutral tones and fun designs, you’ll find the perfect lamp to make the fashion statement you want.

Plus, most of the lamps in this catalogue can be fitted with energy saving globes, making them an environmentally friendly option as well as looking great!

**Choosing a lamp**

The location of the lamp is the key to the style of lamp required. Different lamp styles are more suited to various rooms of the house, for example, your study will require a different style of lighting to the bedroom.

**Know what the lamp is needed for.**

Will it be used for tasks (for example, reading, writing or cooking), or will it be used solely as a decorative piece? You will need to consider further requirements depending on what the lamp is required for. Refer to the next section, “Considerations when choosing Task Lighting” for more tips on selecting the right Task lamp.

**Consider the mood you are trying to portray in the room.**

You want to choose a lamp that will enhance the ambience and mood in the room. You will notice that many bars have dimmer lights to encourage a relaxed atmosphere, while offices are generally well lit. The amount of light can help render the mood you want.

**Consider the other décor you have in the room.**

Your new lamp should compliment the décor of the room, complimenting the style, colours and overall feel.

You will also need to consider the other sources of light coming into the room. Remembering that too much or not enough light in a room can cause eye straining.

**Considerations when choosing Task Lighting**

If you are right handed, ensure the light on you desk comes from the left. This will reduce shadows/shading. The opposite applies for left-handers. If choosing a floor lamp, choose a lamp that has a light strong enough to reduce reflections. The lamp can be positioned over either the left or right shoulder – the left/right handed rule of desk lamps does not apply with floor lamps. The most important requirement for task lighting is achieving a successful balance between task lighting and general lighting to avoid eyestrain.

**Choosing globes for your lamp**

Check the recommended wattage required for your lamp. This can be found on the product page of every lamp on the Beacon Lighting website, and is also stipulated on the product. Never use a higher wattage bulb than what is required. Why not choose an energy saving globe? Low energy light globes use less energy than a normal incandescent light globe, so they not only help to lower greenhouse gas emissions, but also save you money on your power bills!
